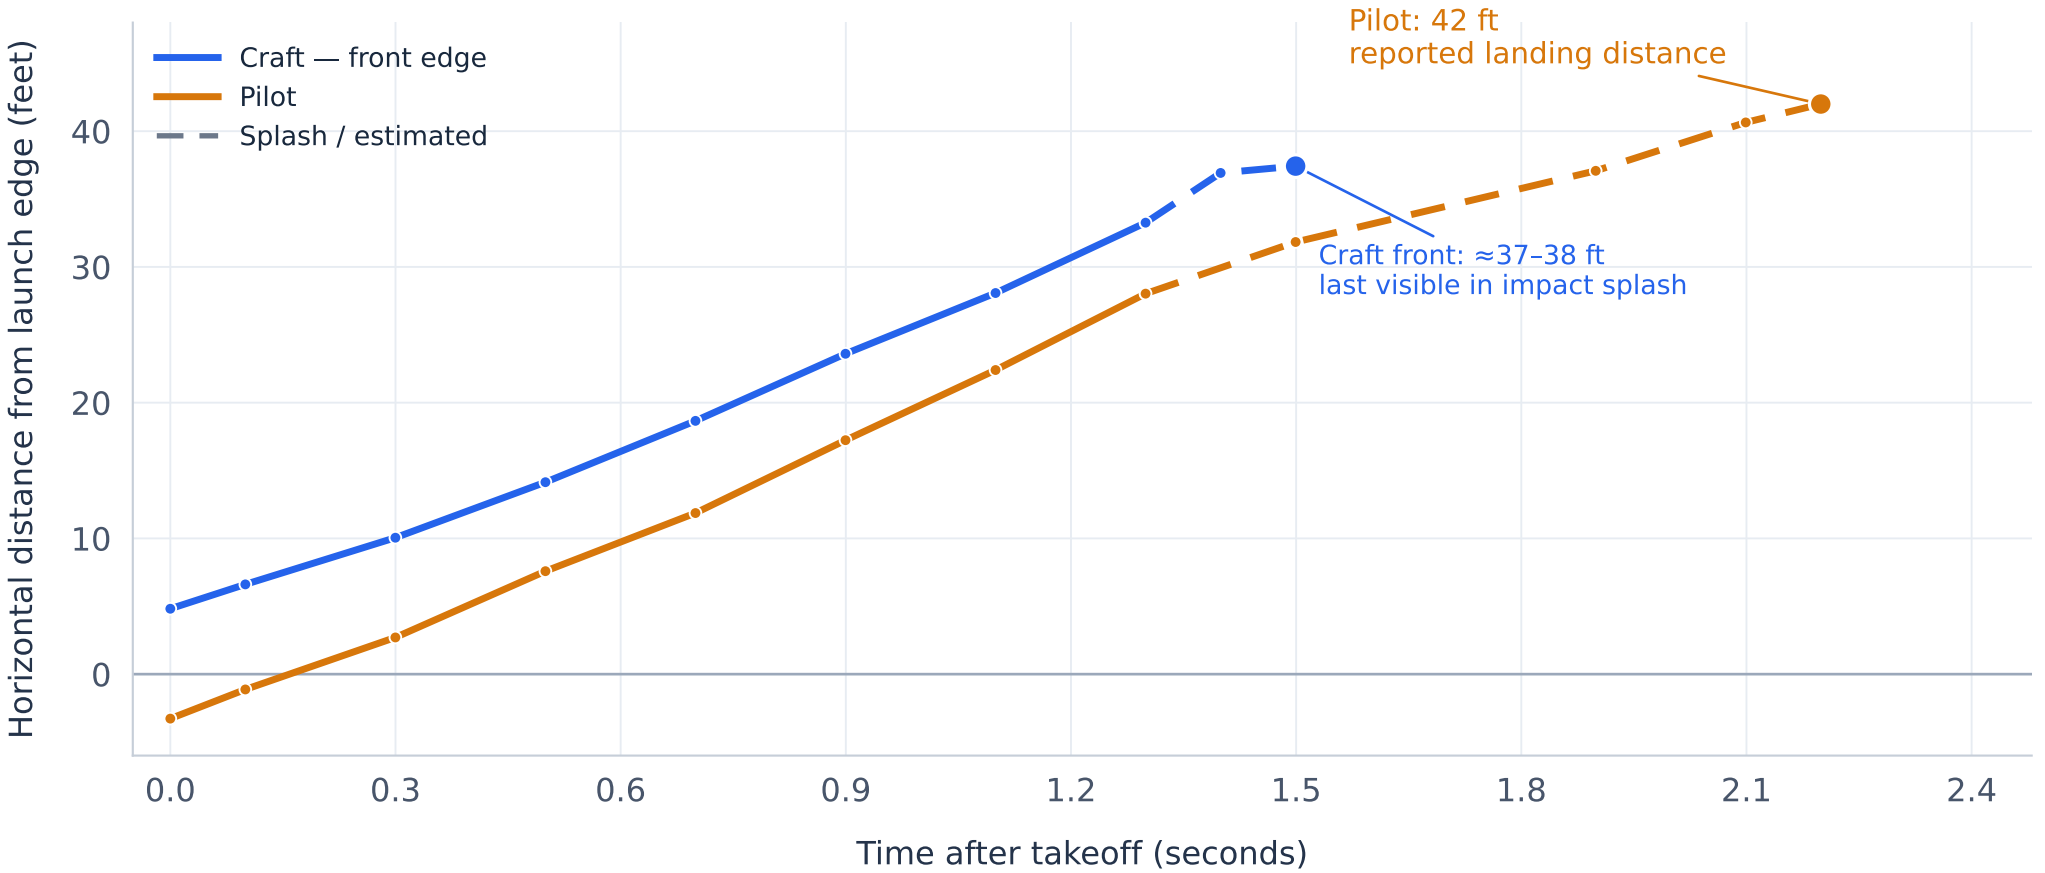
FLUGTAG / SIDE-VIEW RECONSTRUCTION

Distance vs time

Craft front edge and pilot • approximate side-view reconstruction



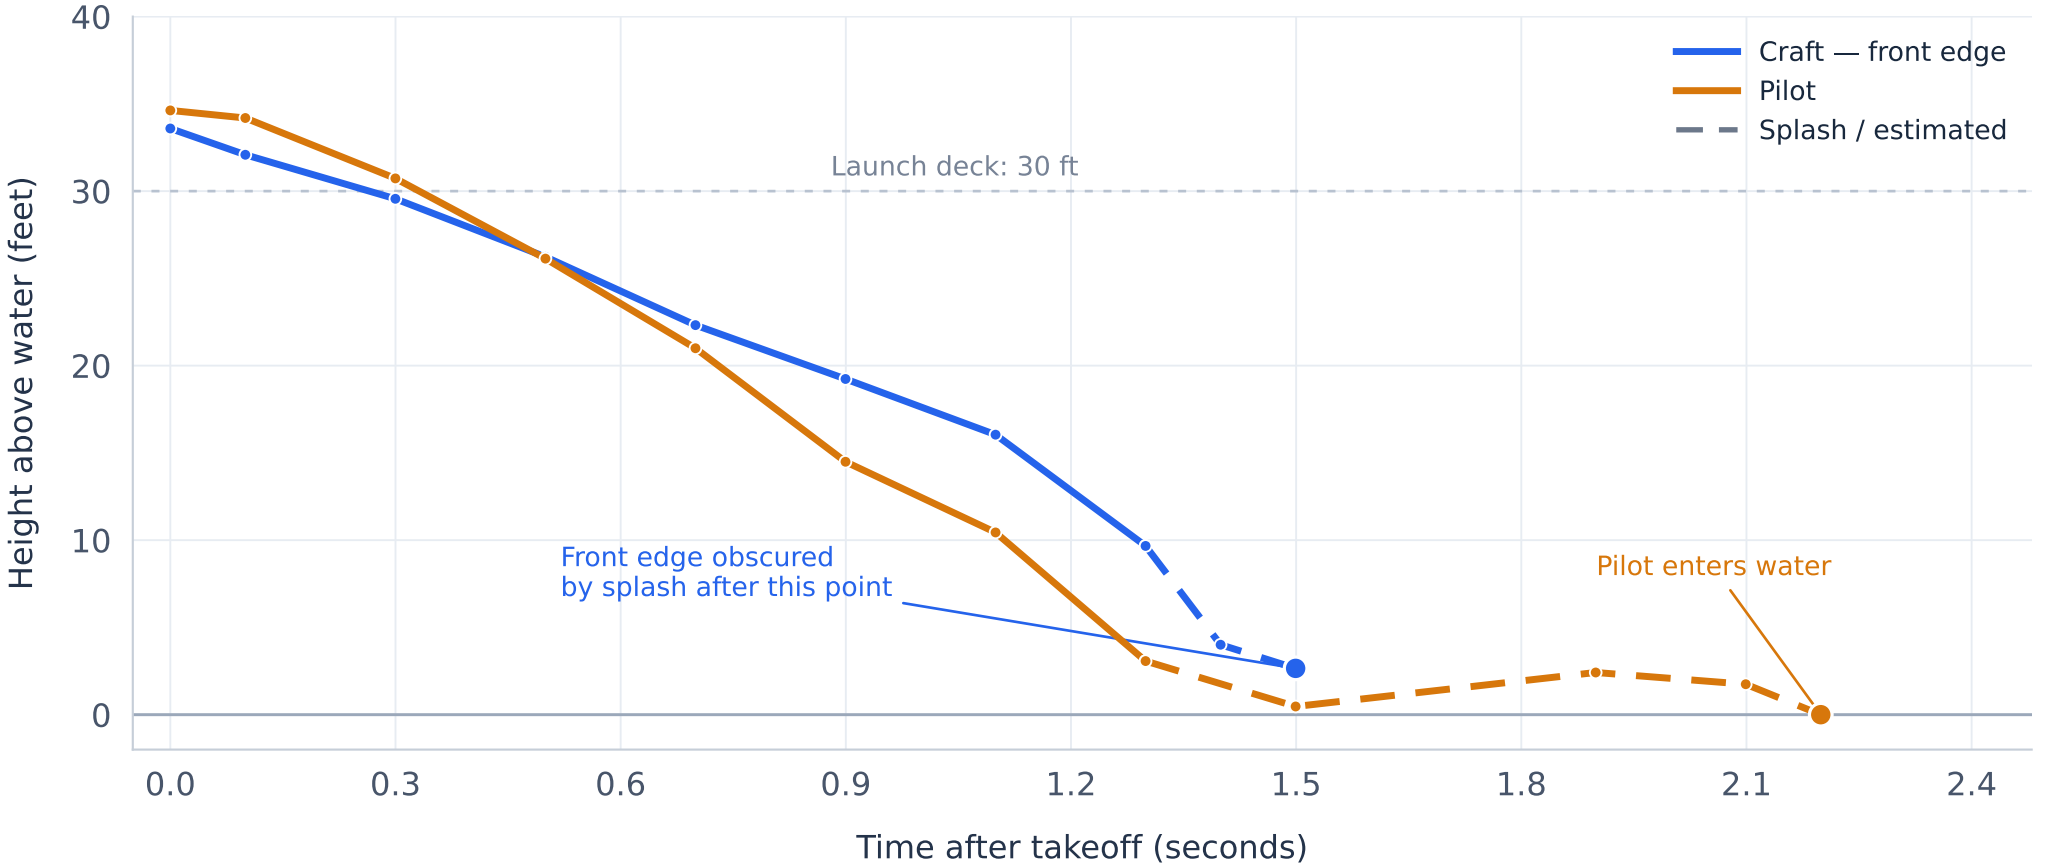
Pilot endpoint fixed at the reported 42 ft; craft front estimated from the visible edge.
The craft line ends when splash obscures that edge. This is horizontal range, not path length.

Time zero ≈ 10.20 s in the original video • Camera motion corrected • Approximate 2-D scale

FLUGTAG / SIDE-VIEW RECONSTRUCTION

Height vs time

Craft front edge and pilot • approximate side-view reconstruction



Reference points: forwardmost visible craft edge and pilot hip / lower torso.
Craft height stops at its last visible point; a zero-height landing is not inferred through splash.

Time zero ≈ 10.20 s in the original video • Camera motion corrected • Approximate 2-D scale
